

Reflecting on Rotuma's Biodiversity: An Alphabetical Sketch Book

LäjeRotuma is a voluntary, community-based environmental awareness and development program initiated in February 2002 by a group of young Rotuman professionals who share a common heritage and commitment to mobilize their own island community to manage well their very limited natural resources and fragile island ecosystem. Rotuma is a 43 square kilometer island located 300 miles Northwest of the main Fiji Group.

The Rufford Small Grants Foundation for Nature Conservation and the GEF Small Grants Programme in Fiji financially supports LäjeRotuma. In recognition of nature as an integral part of daily island life, LäjeRotuma aims to revive cultural and traditional links with the natural world as part of a community-based environmental awareness and development program. This sketch book depicting Rotuma's biodiversity in alphabetical vernacular is the first of a series of locally relevant resource materials produced for awareness to enhance islanders' understanding of making informed decisions for Rotuma today and the future.
